Profile

PHP and Laravel engineer with 14+ years building and maintaining client software. Hands-on development and architecture experience with Vue.js, scheduled publishing, API integrations, and deployment tooling.

Public PHP, Laravel and Vue code: Tamayo Forms, ByteSqueeze, TS SMTP (live Google email use).

Technical Skills

Backend: PHP, Laravel, Eloquent, MySQL, REST APIs, queues, scheduled jobs, role-based access

Frontend: Vue.js, Inertia, JavaScript, HTML, CSS, WordPress, WooCommerce

Testing and delivery: PHPUnit, Playwright, Docker, GitHub Actions, AWS EC2, DigitalOcean; exploring Pest

AI assisted development: Code review, workflow testing, and debugging of AI-assisted implementation

Professional Experience

DesignStudio | May 2014 - August 2026

Web Developer (2014-2016) | Senior Developer (2016-2020) | Software Architect (2020-2026)

- Architected Syndified, a Laravel content syndication platform serving 300+ WordPress sites. Wrote most of the initial implementation, completed delivery with two developers, and later supervised new features.
- Built scheduled weekend publishing with Laravel queues and WordPress cron. A custom plugin requested content and created pages and WooCommerce products from JSON data and Vue.js templates, maintaining approved layouts across themes. Added backups, rollback, and staff error alerts.
- Built a Laravel/Vue.js dashboard combining ActiveCollab hours with Google Ads and Facebook Ads spend and performance. Scheduled historical retrieval and fetched the latest 24 hours on demand.
- Built a WordPress freelancer-marketplace proof of concept, then architected a Laravel/Vue.js internal MVP and implemented the backend, doing most of the development. Supported custom profiles, digital-product management and sales workflows, permissions, and project workflows.
- Created Docker local environments with sample data and shared configuration, plus GitHub Actions deployment workflows. Used PHPUnit on DesignStudio and explored Pest on Syndified for permissions, API, and publishing tests before deployment.
- Led an AWS-to-DigitalOcean migration with a runbook and guidance for a 3-4-person team. Reduced hosting costs approximately 30%, based on before-and-after bills.
- Maintained long-term client applications and WooCommerce ERP, CRM, and inventory integrations through feature updates and ongoing support.

Independent Development

MNRK | mnrkapp.com

- Built and use a Laravel/Vue.js/Inertia agency operations app in freelance client work, covering projects, time tracking, client portals, proposals, and profitability reporting.
- Implemented role-based access, real-time messaging, and background jobs with PHPUnit, Playwright, and GitHub Actions quality checks. Personally review AI-assisted code, test workflows, and debug failures.

Earlier Career

Eco Tek Solutions (Feb 2011-May 2014) and CSEA 471 (Dec 2010-Dec 2015): earlier web development roles building and maintaining client websites.
